A USD ACC: IE000K7MLV64

Large Cap | Factsheet as of 30 September 2025

This is a marketing communication. Please refer to the prospectus of the UCITS and to the KID before making any final investment decisions.

Investment Overview

To seek long-term investment growth, mainly through growth of capital. The Fund mainly invests in equities of US companies of large market capitalisation. The Fund focuses on growth stocks (i.e. companies whose earnings are expected to grow faster than those of similar firms, and whose business growth and other characteristics may lead to an increase in stock price).

Past performance does not predict future returns.

Performance details provided are in share class currency, include the reinvested dividends gross of tax and are net of management fees. Sales charges, taxes and other locally applied costs have not been deducted. The fund's returns may increase or decrease as a result of changes to foreign exchange rates.

Up to date performance figures can be found on our website.

When performance for either the portfolio or its benchmark has been converted, different foreign exchange closing rates may be used between the portfolio and its benchmark.

The A USD ACC share class launched on 04/04/2025. Performance data prior to this date is for the Class A share class launched on 18/04/2012 which had equal or higher charges. Class A performance consists of the Putnam U.S. Large Cap Growth Fund Class A from 18/04/2012 to 04/04/2025.

The Fund launched on 4 April 2025 following the merger of Putnam U.S. Large Cap Growth Fund (the "Merging Fund") which had an equivalent and comparable investment policy and risk profile. However, this Share Class launched at an initial price of USD 100 and accordingly, the difference in NAV is reflective of the difference in closing NAV of the respective Share Class of the Merging Fund and the launch NAV of the Share Class.

What are the Risks?

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested. The Fund is subject to the following risks which are materially relevant: **Concentrated fund:** The fund invests in fewer companies than other funds which invest in shares usually do. This means that the fund does not spread its risk as widely as other funds and will therefore be affected more if an individual company has significant losses. **Equity risk:** prices of equities may be affected by factors such as economic, political, market, and issuer-specific changes. Such changes may adversely affect the value of the equities regardless of company-specific performance. **Sustainability:** The fund's integration of sustainability risks in the investment decision process may have the effect of excluding profitable investments from the investment universe of the fund and may also cause the fund to sell investments that will continue to perform well. A sustainability risk could materialise due to an environmental, social or governance event or condition which may impact the fund's investments and negatively affect the returns of the fund. Complete information on the risks of investing in the Fund are set out in the Fund's prospectus.

Glossary

Ongoing Charges Figure (OCF): The Ongoing Charges Figure (OCF) includes the fees paid to the management company, the investment manager and the depository, as well as certain other expenses. The OCF is calculated by taking the relevant main material costs paid out over the 12-month period indicated and dividing them by the average net assets over the same period. The OCF does not include all expenses paid by the fund (for example, it does not include what the fund pays for buying and selling securities). For a comprehensive list of the types of costs deducted from fund assets, see the prospectus. For recent all-in annual costs, as well as hypothetical performance scenarios that show the effects that different levels of return could have on an investment in the fund, where applicable, see the KID. For funds that lack 12 months of data, or for which OCF is not likely to give a fair idea of likely future costs, the figure shown is an estimate. **Comparator:** Benchmark is used for comparing Fund performance, but is not a constraint to Fund Investment. **Weighted Average Market Capitalization:** A determination of a company's value, calculated by multiplying the total number of company stock shares outstanding by the price per share. For a portfolio, the value represents a weighted average based on the stocks held. **Price to Book:** The price per share of a stock divided by its book value (i.e., net worth) per share. For a portfolio, the value represents a weighted average of the stocks it holds. **Price to Earnings (12-month Forward):** A measure of the price to earnings ratio for a stock using the forecasted earnings for the next 12 months. For a portfolio, the value represents a weighted average of the stocks it holds.
